Hidden
1 World sampled from seed (hidden)
Harness steps
Interface confounds / rejected calls
CONFOUND: names-only interface; arguments ignored for asset; single acquisition round; silent 8-call cap
2 Executor reset from world; tools masked by regime FULL 25 / PHYSICAL_ONLY 23 (no read_iot, get_sensor_history) / DIGITAL_ONLY 22 (no capture_image, read_gauge, open_panel)
Agent-visible
3 Prompt: system prompt + task + tool NAMES (no schemas, descriptions or parameter specs)
4 LLM call 1 -> STEP 1 JSON
5 Parse: strip code fences, greedy {...}, json.loads; failure -> empty dict + parse_error
6 Requested = dict entries of tool_calls
beyond 8
Calls 9+ silently dropped no trace event; reconstructed from STEP 1 list V1 2,443 calls / V2 22
7 Accept first 8 (requested[:8])
per accepted call
8 Trace REQUESTED
9 Tool name in TOOLSET and offered?
no
yes
10 Execute: world asset id substituted; direct Python call to the tool function
Rejected, not executed: unknown -> failed; masked -> unavailable (no EXECUTED event) V1 1 / V2 0
11 Result status
result shown
failed: nested perception-API error (V1 1,892) or other error/exception (V1 0)
failed: environment has no qualifying observation for this asset/modality (V1 8,281) (status "unavailable' never occurs for executed calls)
success (V1 51,921)
EXECUTED only
12 Trace EXECUTED(status); SUCCEEDED; OBSERVATION_DELIVERED only if success AND observation_id (delivered = succeeded: V1 51,921)
13 Result dict appended for EVERY executed or rejected call
after loop
14 LLM call 2: assistant = STEP 1 (parsed JSON); user = results JSON + rendered dial image(s)
15 Verdict = step2['verdict']; unparsed -> NONE (e.g. length-terminated output)
16 Trace DECISION; gold derived; score_episode: TDA = verdict==gold; GSR = TDA AND ERA AND PROV AND COH AND EAA AND CCR (no cited ids passed, so COH = ERA)
Leakage surfaces (from prior audits)
LEAK: MIMII '/abnormal/' path in read_acoustic payload (V1 623)
CONTRADICTION: safety_gate_check reports no work order while get_work_order shows one (V1 1,694)
LEAK: read_gauge gauge_path file-path string (V1 1,966)
LEAK: scenario id (encodes cell) in inspection_id V1 5,757 / V2 719 episodes
LEAK: history_mean (IoT-derived) via get_work_order, also in PHYSICAL_ONLY (2,644 PHYSICAL_ONLY episodes, V1+V2)
INDIRECT EXPOSURE: capture_image dial drawn at the noise-free physical_value (numeric gauge_value not returned)
